

GreenFox

The Linfox commitment to the environment

Sustainability

Strategic plan 2011-13

Sustainability means meeting our needs without compromising the ability of future generations to meet their own needs

Peter Fox-Chairman

Linfox and Sustainability

Linfox is committed to becoming a sustainable company.

Carbon dioxide emission reduction is a key part of achieving our sustainability objectives. We have set a target of a 50% reduction in the rate of CO₂-e emissions by 2015 compared to FY07 emissions.

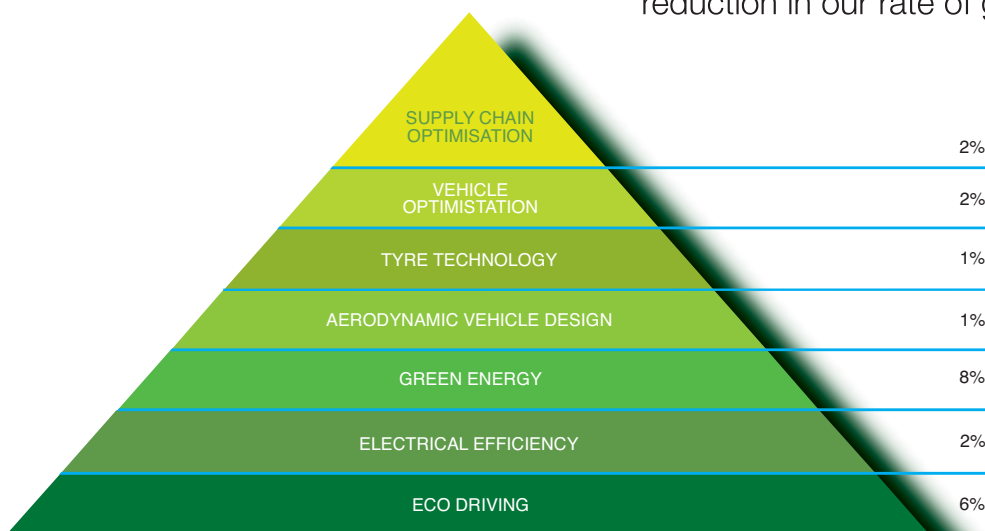

Linfox has made a good start on the sustainability journey, a reduction of 28% in our rate of emissions, but the next steps will be harder and are likely to require more investment of time, energy and resources. We need everyone's assistance to make sure we reach our destination.

Linfox is using the One Planet framework to help us work more sustainably. The framework contains the following ten elements of sustainable performance.

Zero carbon	making buildings more energy efficient and delivering all energy with renewable technologies
Zero waste	reducing waste, reusing where possible, and ultimately sending zero waste to landfill
Sustainable transport	encouraging low carbon modes of transport to reduce emissions, reducing the need to travel
Sustainable materials	using sustainable and healthy products, such as those with low embodied energy, sourced locally, made from renewable or waste resources
Local and sustainable food	choosing low impact, local, seasonal and organic diets and reducing food waste
Sustainable water	using water more efficiently in buildings and in the products we buy; tackling local flooding and water course pollution
Land use and wildlife	protecting and restoring existing biodiversity and natural habitats through appropriate land use and integration into the built environment
Culture and heritage	reviving local identity and wisdom; supporting and participating in the arts
Equity and local economy	creating bioregional economies that support fair employment, inclusive communities and international fair trade
Health and happiness	encouraging active, sociable, meaningful lives to promote good health and well being

Our new target

The pyramid diagram below estimates the areas of activity that will contribute to a further 22% reduction in our rate of greenhouse gas emissions.
